### POLYQuik® P-500
**Extended Set Time Polyurea Coating**

#### DESCRIPTION
POLYQuik® P-500 is a two-component aromatic 100% solids sprayable polyurea elastomeric coating with extended working time and high abrasion resistance, possessing high elongation, and resistance to abrasion, corrosion, and a wide range of chemicals. POLYQuik® P-500 can receive a broadcast of aggregate for slip resistance.

#### WHERE TO USE
- **Parking Decks & Ramps**—for traffic surfaces
- **Waterproofing**—interior or exterior
- **Abrasion Resistant Coating**—for floors & tanks
- **Protective Coating**—for concrete, wood, metal

#### FEATURES AND BENEFITS
- **Superior Elongation**—excellent crack-bridging ability
- **Superior Abrasion Resistance**—durable membrane
- **Serviceable Within 2 hours**—fast turn-around time
- **Excellent Chemical Resistance**

#### PACKAGING
- **COLORS**
  - 5-gal. pails (18.9 L)
  - 50-gal. drums (189 L)

#### YIELD
- **5-gallon bucket set (10 gal total)** = 1.34 ft²
- **50-gallon drum set (100 gal total)** = 13.36 ft²

Sprayed Yield*: 28 ft² per gal or 3.8 gal per 100 ft² at 60 mil DFT (0.63 m² per L at 1.5 mm DFT)

*assumes 100% transfer

#### SHELF LIFE
1 year when properly stored.

#### STORAGE
Store and ship this product in a clean, dry, low-humidity, shaded or covered environment at 60 to 90°F (15 to 32°C).

---

### TECHNICAL INFORMATION

#### Typical Properties

<table>

Partnering through service, innovation, and integrity
APPLICATION

SURFACE PREPARATION

WOOD
1. Store wood in a covered, dry location, and protect surface from damage and contamination.
2. For a completely uniform appearance in the finished product, fill all voids, spaces, or damaged areas prior to coating. Repair or fill areas with POLYQuik® HPU-FILLER or other suitable filler. Contact WVCO representative for filler options and technical recommendations.
3. Priming may be required: prime with POLYQuik Epoxy Primer, PolyPrime, or other suitable primer. Contact WVCO representative for primer options and technical recommendations. Refer to primer technical data sheet for application and cure time information.
4. Ensure wood surface is smooth and dry prior to applying POLYQuik® P-500. Surface must have at least a 36-120 grit surface and less than 10% surface moisture. Humidity levels greater than 85% and surface moisture greater than 10% will create blisters between the coating and wood surface.
5. Apply POLYQuik® P-500 in two 15-20 mils (0.3-0.5 mm) coats in crosshatch pattern and allow to cure for 2-3 minutes. Repeat this application until desired thickness is achieved.

CONCRETE
1. Priming is required; prime with POLYQuik Epoxy Primer, PolyPrime, or other suitable primer. Contact WVCO representative for primer options and technical recommendations. Refer to primer technical data sheet for application and cure time information.
2. The surface being coated must be fully cured (28 days minimum), structurally sound (250 psi or greater tensile strength according to ASTM D 7234), clean (ASTM D 4258), and dry (less than 5% surface moisture, ASTM E1597 and D4763).
3. The surface must have low moisture vapor transmission (less than 3 lb/24 hr/1000 ft², RMA Test Method).
4. Do not apply over concrete if vapor barrier is not present or unknown.
5. Profile surface according to IICRI Guide 03732 to a minimum of CSP 3 by abrasive blasting or hydroblastting. Remove contaminants before blasting.
6. Fill all voids and cracks between 0.06-0.50” (1.5-12.5 mm) with POLYQuik® HPF Filler or other suitable filler. Contact WVCO representative for filler options and technical recommendations.

STEEL & OTHER METALS
1. Steel and other metal surfaces must be cleaned before blasting according to SSPC-SP1. Remove any sharp edges, weld splatters and other surface imperfections.
2. Blast according to SSPC-SP10 / NACE No. 2 Near White standard (0.003” / 0.08 mm profile).
3. Test the surface for non-visible soluble salt contamination according to NACE GG186. If necessary treat the surface with CHLOR® or equivalent chloride remover until less than 3mg/cm² is detected.
4. PRIMING STEEL OR OTHER METALS – Apply POLYQuik Epoxy Primer or PolyPrime only if metal surface temperature is 5°F (3°C) above the dew point to avoid application over damp surface. Refer to primer technical data sheet for application and cure time information. Other primers may also be used. Do not use without contacting your WVCO Representative for approval.
5. For aluminum and galvanized metals, contact your WVCO Representative for additional information.

GEOTEXTILE SURFACES
1. P-500 is applied to the heat treated side of non-woven polypropylene geotextiles. Choose the geotextile weight based on application. Speak to a WVCO Representative before using other types of geotextiles. Protect geotextile surfaces from damage before applying coating. Minimize wrinkles when laying out geotextile. Only walk on geotextile while applying coating to prevent scuffing or frayed surfaces.
2. Apply coating over entire geotextile before adhering it to perimeter surfaces. Use the coating to bond geotextile to perimeter surface after the entire area has cured for 60 minutes, or else bury the coated geotextile in a trench surrounding the application area.
3. Recommended geotextiles include: GEOTEX 1201 and GEOTEX 2x2HF (spray P-500 on the black side).

PROCESSING

PLURAL COMPONENT METER
1. Precondition material to at least 70°F (21°C) for 24 hours. Secure an air driven mixer with 3 folding blades in the center bung hole of the drum. Air driven mixer blade configuration: 8” blade - bottom, 6” blade - middle, and a 6” blade - top. Ensure the mixer is spinning clockwise at a speed adequate enough to thoroughly mix the resin. Mix for 30 minutes before spraying. Repeat above mixing instructions after every 4 hours of operation. Avoid mixing for more than 30 minutes as air may become entrapped in the resin. Mixers are available through WVCO Precision Technologies.
2. P-500 must be sprayed with a high pressure plural-component proportioner. Contact WVCO representative for plural component proportioner recommendations and configurations. Proportioner should be able to heat resin and iso to 150-180°F (65-82°C).
3. Proportioner must generate a minimum spray pressure of 2,000 psi (13.8 MPa), maintain a stable pressure during spray and keep minimal pressure differential between resin and iso – no more than 300 psi – during application.
4. Contact WVCO representative for high and low output application equipment. Equivalent applicator setups from other manufacturers are available. CAUTION: APPLICATOR OUTPUT MUST NOT EXCEED 75% OF METER OUTPUT.

APPLICATION

1. When priming, prime according to Surface Preparation guidelines. Refer to primer technical data sheet for application and cure time information.
2. Avoid blisters and poor adhesion by not applying coating when the humidity is above 85%. Apply the coating when the substrate temperature is stable or dropping. Minimize out-gassing and pinholes on concrete with primers, and with multiple thin applications of coating (10 mils or less per pass) on wood.
3. Clean surface of contaminants (i.e. dust, dirt). Surface may be blown clean with dry compressed air or tack cloth.
4. Spray P-500 in a consistent sweeping pattern, 15-20 mils per pass as a general guideline and maintaining a consistent distance from the substrate. ALWAYS START AND STOP SPRAYING OFF TARGET TO AVOID BLISTERING.
5. Recoat without surface preparation is possible within 12 hours of application at 70°F (21°C). After 12 hours, mechanically abrade the surface and clean with acetone or POLYQuik® Cleaner within 1 hour of recoat. Topcoat within one hour of cleaning.
6. For color stability, aliphatic topcoats may be used. Contact WVCO representative for options and technical recommendations.

CLEANING & MAINTENANCE

• Use POLYQuik® Cleaner to clean and parts after every use. Do not immerse the equipment in Cleaner.CLEAN Y-STRAINERS REGULARLY.
• Contact WVCO representative for pump flushing and long term storage stability recommendations.

NOTE: Proper application is the responsibility of the user. Field visits by WVCO Representative are for the purpose of making technical recommendations only and not for supervising or providing quality control on the jobsite.

HEALTH AND SAFETY

Before handling, you should become familiar with the Material Safety Data Sheet (MSDS) regarding the risks and safe use of this product. To obtain an MSDS please call 800-333-9828 or send an email to: msds@wilvaco.com.

DISCLAIMER OF WARRANTY

TEST RESULTS ARE TO BE CONSIDERED AS REPRESENTATIVE OF CURRENT PRODUCTION AND SHOULDN'T BE TREATED AS SPECIFICATIONS. WHILE ALL THE INFORMATION PRESENTED IN THIS DOCUMENT IS BELIEVED TO BE RELIABLE AND TO REPRESENT THE BEST AVAILABLE DATA OR THESE PRODUCTS, NO WARRANTIES, GUARANTEES, OR REPRESENTATION IS MADE, INTENDED, OR IMPLIED AS TO THE CORRECTNESS OR SUFFICIENCY OF ANY INFORMATION, OR AS TO THE SUITABILITY OF ANY CHEMICAL COMPOUNDS FOR ANY PARTICULAR USE, OR THAT ANY CHEMICAL COMPOUNDS OR USE THEREOF ARE NOT SUBJECT TO A CLAIM BY A THIRD PARTY FOR INFRINGEMENT OF ANY PATENT OR OTHER INTELLECTUAL PROPERTY RIGHT. EACH USER SHOULD CONDUCT A SUFFICIENT INVESTIGATION TO ESTABLISH THE SUITABILITY OF ANY PRODUCT FOR ITS INTENDED USE.

PROPER APPLICATION IS THE RESPONSIBILITY OF THE USER, AS WITH ANY PRODUCT THE USE OF THIS PRODUCT IN A GIVEN APPLICATION MUST BE TESTED (INCLUDING BUT NOT LIMITED TO FIELD TESTING) IN ADVANCE BY THE USER TO DETERMINE SUITABILITY. TESTING IS THE REQUIREMENT OF BOTH ENGINEERS AND CONTRACTORS ALIKE. WVCO DOES NOT WARRANT THE APPLICATION UNDER ANY OR ALL CIRCUMSTANCES.
